

## **CHAPTER 3: TAX EXPENDITURES**

### **3.1 Introduction**

This chapter provides information on all Australian Government tax expenditures. Details include a description of the tax expenditure, its commencement date and (where applicable) its expiry date, legislative references for the tax expenditure and estimates of the annual benefit derived by the recipients of the tax expenditure, including the reliability of those estimates (where quantified).

### **3.2 Notes on the estimates**

Unless otherwise indicated, tax expenditure estimates are calculated on an individual basis and do not take account of potential overlaps with other tax expenditures.

Tax expenditure estimates are separated into estimates (for historical years) and projections (for future years). The estimates for 2008-09 are preliminary and subject to revision upon receipt of further tax data.

The tax expenditure estimates are prepared on the same revenue recognition basis as the budget estimates. Since the 2006-07 Budget, the basis for reporting revenue in the budget has changed. The changes apply to estimates in the TES from 2006-07. All estimates relating to periods prior to 2006-07 are reported in the TES on the Tax Liability Method basis.

Further detail on the revenue recognition basis used in the TES is provided in Chapter 2.

### **3.3 Benchmarks used in the TES estimates**

To provide a clear structure for reporting tax expenditures, the TES benchmarks are divided into three major components reflecting Australia's taxation arrangements.

- The income tax benchmark describes the standard taxation arrangements applying to personal and business income, superannuation, fringe benefits and capital gains.
- The consumption tax benchmark describes the standard taxation arrangements that apply either directly or indirectly to consumption and commodities; namely the supply of goods and services to consumers, tobacco, fuel, types of alcoholic beverages, motor vehicles, natural resources and customs duty.

## *Tax Expenditures Statement*

- The new externalities benchmark covers taxation or other revenue-raising arrangements imposed to recover the external costs of particular activities. This benchmark is included in this edition of the TES for the first time and reports tax expenditures arising from concessions under the Carbon Pollution Reduction Scheme (CPRS).<sup>1</sup>
  - Further information on the new benchmark can be found in Appendix A.

### **3.4 Summary of tax expenditures by benchmark**

Tax expenditures are grouped according to the benchmark against which they are estimated and by the broad subject category to which they relate. The table below provides details of how this chapter is organised.

<b>Benchmark</b>	<b>Specific benchmark category</b>	<b>Subject category</b>	<b>TES reference code</b>
Income tax	Personal income (A)	Tax expenditures for general public services	A1-A7
		Tax expenditures for defence	A8-A16

### 3.5 Guide to tax expenditure descriptions

The descriptions of tax expenditures included in this chapter present a range of information about each identified tax expenditure item. The following example illustrates the information included for a given tax expenditure.

## *Tax Expenditures Statement*

The reference information provides details of:

- the type of expenditure, for instance a tax exemption, deduction or tax offset;
- the year a tax expenditure commenced;
- the year a tax expenditure will cease to operate (if applicable);
- where to find the provisions implementing the tax expenditure in the legislation;
- the *2008 Tax Expenditures Statement* reference code for a tax expenditure that is not new;
- an assessment of the reliability of estimates for a tax expenditure where estimates are available; and
- a category classification for a tax expenditure for which estimates are not available, indicating an order of magnitude range for the likely size of the tax expenditure.

Tax expenditures by functional categories are summarised in Table 1.5. The functional categories are based on an international standard classification of functions of government that is incorporated into the Government Finance Statistics framework.

The 'tax expenditure type' in the reference information classifies tax expenditures according to the way in which they are delivered, for instance, by way of a tax exemption, tax deduction, tax offset, concessional tax rate or deferral of a tax liability.

In the case of fringe benefits tax, tax expenditures may also be delivered through a reduction in taxable value, discounted valuation or record keeping exemption. A reduction in taxable value is a tax expenditure that arises where the taxable value of the fringe benefit is reduced by some factor. A discounted valuation describes provisions where a valuation other than the actual value of the benefit is used as a basis for calculating the tax. Record keeping exemptions arise where an employer is not obliged to maintain current records of benefits to calculate the tax.

Certain tax expenditures relating to depreciation allow for the accelerated write-off of depreciable assets and these tax expenditures are identified as accelerated write-off. In the early years of an asset's life, accelerated write-offs allow larger deductions than the benchmark depreciation treatment. In the later years of an asset's life when the accelerated write-off is complete, deductions that would be allowed under the benchmark are no longer available. Thus, accelerated write-offs act like tax deferrals.

### The presentation of capital gains tax expenditures

In general, the discount components of capital gains tax concessions are reported as part of the tax expenditure *Capital gains tax discount for individuals and trusts* (E14) in order to provide a clearer indication of the value of CGT concessions to taxpayers and avoid double counting. The estimate shown for each individual tax expenditure, except for E14, is the estimate of the concession in excess of the discount.

The same approach is taken for the CGT main residence exemption (E4) but, due to the significant value of the discount component of this item, the value of the CGT discount component is reported as a separate item (E5).

### ORDER OF MAGNITUDE RANGE

In many cases, estimates for tax expenditures are not available because of data limitations or because of the nature of the tax expenditure itself. In such cases, the various modelling techniques used to estimate the value of tax expenditures, which are discussed in detail in Appendix A, are unable to be utilised fully to produce reliable estimates.

The following categories are used to provide an indication of the size of the expenditure for those tax expenditures for which an estimate is not available. The category assigned to an unquantifiable tax expenditure refers to the year the tax expenditure is considered to be most significant.

Category	Order of magnitude range	
	Expected tax expenditure (\$m)	
0	0 on average	
1	0 — 10	
2	10 — 100	
3	100 — 1,000	
4	1,000 +	
na	not available	

The category classifications are provided as a broad guide only and have been estimated without the benefit of detailed data. They are based on assumptions and judgment and as such they should be treated with caution. Tax expenditures that are categorised in this way are not included in the aggregate measured tax expenditures reported in Chapter 1.

The category classification also indicates whether a tax expenditure is positive or negative. A positive sign denotes a positive tax expenditure, while a negative sign denotes a negative tax expenditure. For example, reliable estimates for an exemption

### *Tax Expenditures Statement*

from fringe benefits tax that applies to benefits provided by certain international organisations (D1) are not available. As such, category 1+ has been allocated to this tax expenditure to indicate the broad range of the size of the tax expenditure. It indicates that this tax expenditure is considered to be up to \$10 million in the year the tax expenditure is most significant.

Where a tax expenditure for which an estimate is not available is small and is expected to average zero over the reporting period, it is classified as category 0. For a tax expenditure where neither an estimate, nor an order of magnitude could be assigned, an 'na' classification has been adopted.

### **RELIABILITY OF ESTIMATES**

Tax expenditure estimates in this statement aim to represent the best estimates that can be made given the available data. The estimates vary in their reliability, depending upon the quality and detail of the underlying data that is used in the estimates, the frequency of that data, the extent to which calculations are based on assumptions, the sensitivity of the results to those assumptions and whether future taxpayer behaviour is reasonably predictable. Future taxpayer behaviour is a factor in determining the reliability of tax expenditure projections, where taxpayer behaviour affects the future level of use of tax concessions. In many cases, there is insufficient data to produce a reliable estimate for a tax expenditure item, in which case the estimate will be shown as being unquantifiable.

The reliability of quantified tax expenditures is shown in Table 3.1. The table shows that of the 337 tax expenditures identified, estimates are available for 211. Of the quantified tax expenditures, 53 per cent are rated as having medium or higher reliability, accounting for 39 per cent of the total identified value of tax expenditures in 2009-10.

**Table 3.1: Reliability of quantified tax expenditures**

### 3.6 Income tax benchmark

Most Australian Government taxes are imposed on income rather than commodities. The following sections outline the general features of the income tax benchmark.

Separate benchmarks are used for personal income, business income, superannuation, fringe benefits and capital gains because they have distinct tax regimes that affect how tax expenditures are measured against the general income tax benchmark.

Detailed descriptions of the income tax benchmarks are provided in Appendix A.

## PERSONAL INCOME

General features of the personal income tax benchmark:

- a tax base including all nominal income less expenses incurred in earning income;
- a tax scale comprising tax rates, associated income tax thresholds, Medicare levy and low income tax offset;
- the individual as the tax unit; and
- the financial year as the tax period.

### Tax expenditures for general public services

#### A1 Deduction for expenses incurred by election candidates

<i>Legislative reference:</i>	Sections 25-60, 25-65 and 25-70 of the <i>Income Tax Assessment Act 1997</i>							

Certain expenses incurred by candidates contesting federal, state and territory government elections are deductible. Expenses of up to \$1,000 per election incurred by candidates contesting local government elections are also deductible. Candidates are eligible for the deduction irrespective of whether they successfully contest the election.

## A2 Exemption of official salaries and certain other income of the Governor-General and Governor of any State

General public services — Legislative and executive affairs (\$m)

	2005-06	2006-07	2007-08	2008-09	2009-10	2010-11	2011-12	2012-13

<i>Legislative reference:</i>	Former section 51-15 of the <i>Income Tax Assessment Act 1997</i>							

The ordinary and statutory income of the Governor-General and State Governors derived from a source outside Australia, along with their official salaries, were exempt from income tax. This exemption is not available for appointments made after 28 June 2001.

The NSW Governor is the only remaining State Governor appointed before 28 June 2001.

## A3 Exemption of income earned by Australians from working on approved overseas projects

General public services — Foreign affairs and economic aid (\$m)

	2005-06	2006-07	2007-08	2008-09	2009-10	2010-11	2011-12	2012-13

<i>Estimate Reliability:</i>							
<i>Commencement date:</i>	1986			<i>Expiry date:</i>			
<i>Legislative reference:</i>	Section 23AG of the <i>Income Tax Assessment Act 1936</i>						

Foreign earnings derived by an Australian individual engaged in continuous foreign service for not less than 91 days may be exempt from income tax if the foreign service is directly attributable to:

- the delivery of Australia's overseas aid program by the individual's employer;
- the activities of the individual's employer in operating a developing country relief fund or a public disaster relief fund;
- the activities of the individual's employer being a prescribed institution that is exempt from Australian income tax;
- the individual's deployment outside Australia by an Australian government (or an authority thereof) as a member of a disciplines force; or
- an activity of a kind specified in the regulations.

This exemption does not apply where the foreign earnings are exempt from income tax in the foreign country for certain reasons.

This concession was modified in the 2009-10 Budget by replacing the previous broader exemption with the targeted concession above, with effect from 1 July 2009.

**A5 Exemption of income of certain visitors to Australia**

General public services — Foreign affairs and economic aid (\$m)							
2005-06	2006-07	2007-08	2008-09	2009-10	2010-11	2011-12	2012-13

<i>Legislative reference:</i>	Section 842-105 and Section 768-100 of the <i>Income Tax Assessment Act 1997</i>						

The earnings of certain foreign residents and visitors to Australia are exempt from income tax.

This exemption broadly applies to Australian sourced income earned by foreign residents in their official capacity:

- as a visiting foreign government representative or member of their entourage;
- as a representative of an educational, scientific, religious or philanthropic society or association;
- as a member of the foreign media reporting on proceedings relating to a visitor referred to in one of the preceding points;
- as an advisor to an Australian Government Agency or as a member of a Royal Commission; or
- in assisting the Australian Government in regards to Australia's defence where the income is non-exempt in their country of residence;

The official salary and foreign sourced income earned by visitors to Australia are also exempt from income tax where reciprocal tax exemptions are provided by their home country and the visitor is:

- a foreign Government representative or staff of the representative when the Vienna Conventions on Consular or Diplomatic Relations do not apply; or
- an officer of a British Commonwealth of Nations Country in Australia to either provide their services on behalf of their country or an Australian Government Agency in accordance with intergovernmental arrangements.

<i>Legislative reference:</i>	Section 51-5 of the <i>Income Tax Assessment Act 1997</i> Regulation 51-5.01 of the <i>Income Tax Assessment Regulations 1997</i>						

Certain allowances payable to Australian Defence Force personnel are exempt from income tax. These include the following allowances — separation allowance, disturbance allowance, rent allowance paid to a member without dependents or a

member with dependents (unaccompanied), transfer allowance, and deployment allowance.

In the case of rent allowance paid to Australian Defence Force personnel, the benchmark treatment is compensation for the actual additional cost faced by employees in living away from their homes. Accordingly, this tax expenditure relates solely to that part of the allowance that is in excess of this compensation.

Australian Federal Police and civilian personnel contributed by Australia to an armed force of the United Nations may receive compensation in respect of death, impairment or incapacity resulting from their service. Such compensation payments are exempt from income tax. The estate of a deceased civilian who has performed United Nations service may also receive relief from unpaid tax in respect of pay and allowances. In addition, a partial income tax exemption applies to living allowances paid to civilians who died during periods of United Nations service.

Australian Defence Force personnel who serve overseas and civilian personnel contributed by Australia to an armed force of the United Nations may be eligible for a tax offset. Personnel or civilians qualify for the full offset amount if their total period of overseas service is more than half the income year or if they die while on service. Personnel or civilians who serve for less than half the income year receive a proportion of the full amount. The offset is made up of a base amount with additional entitlements for individuals who maintain dependants.

Education Tax Refund payments are exempt from income tax.

Eligible taxpayers can claim a refundable tax offset for 50 per cent of eligible education expenses incurred in respect of a student undertaking primary or secondary school studies, up to a maximum amount. For expenses incurred in 2008-09, the maximum amount of the Education Tax Refund is \$375 for each primary school student and \$750 for each secondary school student. In later years, these maximum amounts will increase in line with increases in the Consumer Price Index.

The Education Tax Refund applies to eligible expenses incurred from 1 July 2008.

<i>Estimate Reliability:</i>		Medium — High					
<i>Commencement date:</i>		1998		<i>Expiry date:</i>			
<i>Legislative reference:</i>		Section 52-125 of the <i>Income Tax Assessment Act 1997</i>					

Taxpayers can receive a 30 per cent refund on the costs of private health insurance either as a refundable tax offset, direct payment or through reduced premiums. From

1 April 2005, the refund increased from 30 per cent to 35 per cent for individuals aged between 65 and 69 years, and to 40 per cent for individuals aged 70 years and over. These payments are exempt from income tax.

From 1 July 2010 the Government will introduce three new 'Private Health Insurance Tiers' which may affect the amount of refund a taxpayer can receive:

- Tier 1: for singles earning more than \$75,000 (couples \$150,000) the refund will be reduced to 20 per cent for those aged less than 65 years, 25 per cent for those aged between 65 and 69 years and 30 per cent for those aged 70 years and over.
- Tier 2: for singles earning more than \$90,000 (couples \$180,000) the refund will be reduced to 10 per cent for those aged less than 65 years, 15 per cent for those aged between 65 and 69 years and 20 per cent for those aged 70 years and over.
- Tier 3: for singles earning more than \$120,000 (couples \$240,000) no refund will be provided.

For families with more than one dependent child the couples threshold is increased by \$1,500 for each dependent child after the first.

The singles thresholds will be indexed annually to changes in average weekly ordinary time earnings. The couples thresholds will be double the relevant singles threshold.

<i>Legislative reference:</i>		Sections 8B to 8D of the <i>Medicare Levy Act 1986</i> <i>A New Tax System (Medicare Levy Surcharge — Fringe Benefits) Act 1999</i>					

Individuals and couples who do not have appropriate private health insurance and whose income exceeds a threshold are subject to an increased Medicare levy. From 1 July 2009, the income for surcharge threshold purposes above which the private health insurance surcharge is payable is \$73,000 for single individuals and \$146,000 for

couples and families. For families with more than one dependent child the threshold is increased by \$1,500 for each dependent child after the first. The singles threshold is indexed annually to changes in average weekly ordinary time earnings. The couples and families threshold is double the singles threshold. The surcharge has applied since 1 July 1997 and is a negative tax expenditure.

From 1 July 2010 the Government will introduce three new 'Private Health Insurance Tiers' which may affect the amount of surcharge to which a taxpayer is subject:

- Tier 1: for singles earning more than \$75,000 (couples \$150,000) the surcharge will remain at one per cent of taxable income (these thresholds are based on the projected indexation of the current thresholds).
- Tier 2: for singles earning more than \$90,000 (couples \$180,000) the surcharge will be increased to 1.25 per cent.
- Tier 3: for singles earning more than \$120,000 (couples \$240,000) the surcharge will be increased to 1.5 per cent.

For families with more than one dependent child the couples threshold is increased by \$1,500 for each dependent child after the first.

The singles threshold will be indexed annually to changes in average weekly ordinary time earnings. The couples threshold will be double the relevant singles threshold.

The Child Care Tax Rebate (CCTR) is exempt from income tax.

From 1 July 2007 families may receive CCTR to cover a proportion of out-of-pocket expenses on approved child care, up to a maximum amount per child. For expenses incurred in 2006-07 and 2007-08, this proportion was 30 per cent and the maximum amount per child was \$4,211 in 2006-07 and \$4,354 in 2007-08. For expenses incurred in 2008-09 and later years, this proportion is 50 per cent. The maximum amount per child is \$7,500 per child in 2008-09 and will increase in line with increases in the Consumer Price Index in later years.

For child care expenses incurred in 2004-05 and 2005-06, taxpayers may have been eligible for a tax offset in the next income year. See also the related tax expenditure A33 *Tax offset for child care*.

<i>Legislative reference:</i>	A New Tax System (Commonwealth State Financial Arrangements) Act 1999 Appendix D, Intergovernmental Agreement on Commonwealth State Financial Relations Appropriation Act (No. 2) 2001-02 (for the additional grant) and relevant state legislation						

Payments made under the First Home Owners Grant Scheme are exempt from tax. Eligible applicants purchasing or building their first home from 1 July 2000 are entitled to \$7,000 assistance to compensate for the impact of the GST on the price of houses.

On 14 October 2008, the Australian Government announced that it would provide additional assistance to first home buyers. Eligible first home buyers would receive an additional \$7,000 for an established home (\$14,000 in total) or an additional \$14,000 for a new home (\$21,000 in total) when purchasing between 14 October and 30 June 2009 (inclusive).

In the 2009-10 Budget the Australian Government announced that the additional assistance for eligible first home buyers would be extended to 30 September 2009 (inclusive) at the previously announced levels. For eligible first home buyers entering into contracts between 1 October 2009 and 31 December 2009 (inclusive) additional assistance of \$3,500 (\$10,500 in total) will be provided for the purchase of established homes and \$7,000 for the purchase of new homes (\$14,000 in total).

<i>Legislative reference:</i>	Section 26AAC and Division 13A of the <i>Income Tax Assessment Act 1936</i> Division 83A of the <i>Income Tax Assessment ACT 1997</i>						

Discounts on shares and rights acquired under an employee share scheme are generally included in a taxpayer's assessable income in the year they are acquired. However, two tax concessions may be provided – an upfront tax exemption or a deferral of tax.

Tax may be deferred in employee share schemes where there is a 'real risk of forfeiture' or the scheme is a capped salary sacrifice based scheme, and where the taxpayer and the scheme satisfy certain other conditions. The maximum period of deferral is seven years. This deferral period may be shortened by the occurrence of certain events, such as the employee ceasing employment. The deferral arrangements for salary sacrifice based schemes apply up to a cap of \$5,000 worth of shares.

For taxpayers who pay tax upfront, a \$1,000 tax exemption is available to taxpayers with an adjusted taxable income of less than \$180,000, if the taxpayer and the scheme satisfy certain other conditions.

Some shares or rights acquired under an employee share scheme prior to 1 July 2009 have different conditions for deferral of tax applying to them.

The value of a pension or annuity may partly consist of contributions towards the income stream from the recipient's after-tax income. This part of the income stream is not taxed again when it is returned in the form of pension or annuity payments. A tax expenditure arises because the tax free part of a pension or annuity is apportioned evenly over the term of the income stream, providing a tax deferral advantage.

<i>Commencement date:</i>	1 July 2000					<i>Expiry date:</i>		
<i>Legislative reference:</i>	Division 35 of the <i>Income Tax Assessment Act 1997</i>							

The non-commercial losses rules prevent individuals carrying on unprofitable business activities and claiming deductions for losses arising from such activities against their other income. Where a businesses activity is objectively determined to be commercial in nature, the Commissioner of Taxation allows the taxpayer to apply those losses against their other income.

Individuals with adjusted taxable incomes of less than \$250,000 carrying on a business may apply losses from a business activity against their other income in an income year if they satisfy one of four statutory tests in that year. These tests apply in place of the objective tests by the Commissioner of Taxation. The four tests are designed to identify those businesses that are commercial in nature by looking at various known characteristics of businesses such as prior years' profits, assets used in carrying on the business, and revenues.

A proportion of individuals with an adjusted taxable income under \$250,000 that meet one of the four tests and apply losses from their business activity against their other income, will nonetheless be carrying on an uncommercial business activity.

Primary producers and artists earning less than \$40,000 receive an exemption from the non-commercial losses rules (A71).

First Home Saver Accounts provide a vehicle for individuals to save for the purchase of their first home. The income earned by First Home Saver Accounts is taxed to the account provider at a rate of 15 per cent.

The tax expenditure reflects the extra tax in a particular year that may be collected if First Home Saver Account earnings were included in the assessable income of the account holder and taxed at their marginal rate, rather than at 15 per cent.

Where an individual withdraws money from their account, but does not use it to purchase a first home, they will be subject to a misuse tax which will effectively tax their earnings at the top marginal tax rate, plus Medicare levy. This reduces the amount of the tax expenditure.

The non-commercial losses rules prevent individuals carrying on unprofitable business activities and claiming deductions for losses arising from such activities against their other income. Where a businesses activity is objectively determined to be commercial in nature, the Commissioner of Taxation allows the taxpayer to apply those losses against their other income.

Individuals that carry on a primary production or professional arts business, who have income from other sources of less than \$40,000, are exempt from the non-commercial losses provisions.

Taxpayers with an income below \$250,000 also receive concessional treatment under the non-commercial losses provisions (A58).

## BUSINESS INCOME

General features of the business income tax benchmark:

- a tax base including all nominal income less expenses incurred in earning income;
- a tax rate as the rate that applies to the entity;
- the individual entity (or head entity of a consolidated group) as the tax unit;
- the dividend imputation system, which ensures that company profits distributed to resident shareholders are taxed at the shareholders' marginal rate of tax; and
- the financial year (or substituted accounting period) as the taxation period.

No income tax consequences arise when certain payments are made out of the National Guarantee Fund.

Up until 31 March 2005 the National Guarantee Fund undertook the dual roles of investor protection and clearing support for the Australian Stock Exchange. The *Corporations Act 2001* provides for the splitting of these functions by allowing the transfer of funds for clearing and settlement system support to another entity. A tax expenditure arises because these transfers are permitted free of tax consequences.

Tax treaties reduce or eliminate double taxation caused by the exercise of source and residence country taxing rights on cross border income flows. Under some of Australia's tax treaties, certain dividends, interest and royalties attract reduced

withholding tax rates. These include interest withholding tax exemptions for financial institutions and Governments and reduced dividend withholding tax rates where dividends are paid to companies with controlling interests in the companies paying the dividends, provided that certain integrity measures are satisfied.

The reductions are bilateral, thereby ensuring that withholding taxes will not result in unrelieved double taxation either for those foreign enterprises investing in Australia from treaty partner countries, or for Australian enterprises investing abroad in treaty partner countries. Prior to 2008-09 the benchmark that applied resulted in there being no tax expenditure.

The tax sparing provisions in Australia's tax treaties apply to tax incentives (for example, tax holidays) offered by developing countries to foreign investors. The effect

of these tax sparing provisions is that income earned by Australian taxpayers who invest in certain developing countries is effectively subject to a tax exemption. Under tax sparing, the tax forgone by the country providing the tax concession to Australian resident investors is deemed to have been paid for the purposes of Australia's foreign tax credit system. This enables Australian residents to claim a tax credit in relation to their investments despite receiving a tax concession by the foreign country. Tax sparing arrangements in most tax treaties have now expired.

Some life insurance investment policyholders receive a concessional rate of tax because the policyholders' undistributed income is taxed at the company rate.

When a life insurance policy matures, is forfeited, or is surrendered the income distributed is known as a reversionary bonus. Reversionary bonuses that are distributed to policyholders more than 10 years after the commencement of the policy are exempt from further tax. If the bonuses are distributed in the ninth or tenth year after commencement of the policy, then only a fraction (two thirds or one third respectively) of the bonuses are taxable. If the bonuses are distributed within eight years of the commencement of the policy, they are fully taxable. To the extent that reversionary bonuses are taxable, then policyholders are allowed a rebate at the company rate of tax.

This tax expenditure ensures that reversionary bonuses, on which a life insurance company has paid tax, are not subject to a form of double taxation when paid to policyholders during the taxable period of a policy.

The rate of income tax payable by a not-for-profit company that has a taxable income not exceeding \$416 in a given income year is reduced to zero. Income tax is payable at a rate of 55 per cent on all income of not-for-profit companies between \$416 and \$915.

This arrangement has the effect of providing an exception from income tax for not-for-profit companies for the first \$416 of income, and then phasing in the ordinary corporate income tax rate of 30 per cent on all income, including the first \$416, when the company has income between \$416 and \$915. When a not-for-profit company has an income over \$915, the company tax rate is applied from the first dollar.

The proceeds paid to shareholders who participate in an off-market share buy-back are split into a dividend component and a capital component. The dividend component of the buy-back proceeds may be fully franked. This allows companies that undertake off-market share buy-backs to distribute franking credits to participating shareholders beyond the level that would normally be available. Treating part of the proceeds as a dividend makes off-market share buy-backs more attractive to low marginal tax rate taxpayers. This facilitates streaming of franking credits to those shareholders that can obtain the most benefit. The tax expenditure is equal to the difference in tax payable, had those franking credits been distributed uniformly to all shareholders.

The tax expenditure from off-market share buy-backs may be partly offset by the anti-streaming provisions in the income tax law that operate to ensure that part of the

buy-back proceeds are treated as capital (and therefore give rise to a capital gain or a capital loss rather than a franked dividend).

Certain payments to victims of Australian natural disasters are exempt from income tax.

Payments from the Business Assistance Fund to businesses adversely affected by Cyclone Larry or flooding owing to the cumulative effects of Cyclones Larry and Monica are exempt from tax. Taxpayers are also exempt from tax on Government reimbursements for fuel excise paid to businesses adversely affected by Cyclone Larry.

Clean-up and Restoration Grants paid to small businesses and primary producers affected by the 2009 Victorian bushfires are exempt from tax. The amount of the grants ranges from \$5,000 to \$25,000 in cases where the applicant has suffered significant damage. The grants are defined in the income tax law as non assessable non-exempt income.

Without a specific definition, such grants would generally be treated as assessable income. Expenses related to the carrying on of a business (that is, those funded by using the grant) would generally be deductible.

Film production companies incurring expenditure on certain productions in Australia may be eligible for refundable tax offsets. The tax offsets are the location offset, the producer offset and the post, digital and visual effects (PDV) offset. The refundable tax offsets are paid directly to the producers through the tax system and are exempt from tax. A production company can claim no more than one of the film tax offsets for each film.

Under the location offset, producers of qualifying large scale films which commenced principal photography prior to 8 May 2007 are eligible to receive a refundable tax offset of 12.5 per cent of qualifying Australian production expenditure (QAPE). Producers of qualifying large scale films which commenced principal photography on or after 8 May 2007 are eligible to receive a refundable tax offset of 15 per cent of QAPE.

The producer offset enables producers of qualifying Australian films to receive a refundable tax offset of 40 per cent of QAPE incurred on a feature film, or 20 per cent of QAPE incurred on films that are not feature films, for QAPE incurred on or after 1 July 2007.

## Tax Expenditures Statement

The PDV offset is equal to 15 per cent of QAPE and is available for post, digital and visual effects production that commences on or after 1 July 2007.

A prepayment in relation to investments in infrastructure bonds, shares, units, rental property and arrangements entered into before 1 July 2000, to which product rulings apply, continues to be immediately deductible. This is conditional upon the prepayment expenditure meeting the requirements described in the tax expenditure Prepayment rule for Simplified Tax System taxpayers and non-business expenditure by individuals. The benchmark treatment of prepayments is that they are deductible over the period of the expenditure. The tax expenditure allows deductions to be spread over a shorter period and consequently it allows greater deductions than the benchmark treatment.

This was conditional upon the prepayment expenditure meeting certain requirements, including that the activities in question are completed within 12 months of the prepayment being made or the activities commencing and by the end of the following financial year. This tax expenditure was available for investors in forestry managed investment schemes. The benchmark treatment of prepayments was that they are deductible over the period of the expenditure. The tax expenditure allowed deductions to be spread over a shorter period and consequently allowed greater deductions in the year of investment than the benchmark treatment.

The Farm Management Deposit (FMD) scheme allows primary producers (with a limited amount of non-primary production income) to defer their income tax liability. Primary producers are able to claim deductions for their FMD made in the year of deposit, with subsequent withdrawals being subject to assessment in the year of withdrawal. The FMD has a maximum limit on deposits of \$400,000. Primary producers in exceptional circumstance areas are able to withdraw their deposits within 12 months while maintaining the concessional tax treatment of the scheme. The FMD scheme replaced the Income Equalisation Deposits and Farm Management Bonds schemes on 2 January 1999.

Projections beyond 2009-10 are not reported as the tax expenditure is very sensitive to variations in the amounts deposited and withdrawn in any year, which are dependent on a number of external factors.

Primary producers can elect to pay tax at a tax rate based on their average income earned over the previous five income years. If the taxpayer has not been using this facility for five years, the tax rate is based on the income years in which averaging has applied, and the previous year. This provides a concession because, on balance, the saving from paying less tax in high income years outweighs additional tax paid in low income years.

Projections beyond 2008-09 are not reported as the tax expenditure is very sensitive to variations in primary production income, which depends on a number of external factors.

Insurance recoveries may be received in relation to timber lost because of fire, or livestock lost due to disasters (for example, drought, fire, flood or disease). Primary producers who receive such insurance recoveries can elect to spread the income equally over five income years, resulting in a tax deferral. This concession only applies where the livestock are assets of a primary production business carried on in Australia.

Interest income from loans to eligible infrastructure facilities is exempt from income tax and the interest paid by the borrower is not deductible. After 15 December 1994, the lender could elect to include the income in assessable income and receive an offset at the company tax rate. This scheme was closed to new projects from 14 February 1997, and replaced by the Land Transport Infrastructure Borrowings Tax Offset Scheme in 1998.

This represents a negative tax expenditure as the full value of the car should be depreciated under the benchmark.

The 'car limit' for 2009-10 is \$57,180. This amount is indexed annually to movements in the motor vehicle purchase sub-group of the Consumer Price Index. The 'car limit' is not changed if the index has fallen for a particular year.

For income years commencing on or after 1 July 2007, taxpayers can claim deductions for expenses incurred in boating activities that are not carried on as a business. However, these deductions can only offset income from the boating activities, and if the deductions are greater than the income for that income year, the excess is carried forward, for offset against future income from boating activities.

For income years commencing prior to 1 July 2007, deductions are allowable only where the taxpayer can demonstrate that they were carrying on an active business using a boat.

Small businesses that have an annual turnover of \$50,000 or less are eligible for a tax offset of 25 per cent of the income tax liability attributable to their business income. The offset phases out for annual turnover between \$50,001 and \$75,000. From 1 July 2007, this concession applies to any small business entity, whereas previously the concession only applied to taxpayers in the then Simplified Tax System.

In the 2008-09 Budget, the Government announced that eligibility to the offset would also be subject to a means test from 1 July 2008. Under the means test, the offset phases out for singles from \$70,000 and for families from \$120,000.

Venture capital fund managers may be paid a performance-based share of partnership profits by investors. Such performance payments are 'carried interests'. Under the benchmark, these entitlements are taxable income of the fund managers as they accrue. Instead, under the law, an entitlement to receive a carried interest is a capital gains tax event in the hands of venture capital fund managers and is not treated as income. Consequently, taxation of the income is deferred until the gains are realised and individual managers are eligible for the 50 per cent discount on their carried interest.

Taxpayers are able to claim a deduction for some or all of the cost of the capital protection associated with capital protected borrowings.

The interest cost of capital protected borrowings includes the cost of borrowing and the cost of capital protection. Under the benchmark, the cost of borrowing is deductible, however the cost of capital protection where it is considered capital in nature is not deductible but instead included in the cost base of the asset.

The concessional treatment will not apply to capital protected borrowings arrangements entered into after 13 May 2008. Arrangements entered into before that date will continue to receive the concessional treatment for a period of up to five years.

Concessional taxation treatment is available to investment companies that are established and registered as Pooled Development Funds (PDFs). Income arising from investments in small to medium enterprises is taxed at 15 per cent and other income is taxed at 25 per cent. These concessional tax rates are designed to encourage PDFs to invest in small to medium enterprises. In addition, investors who invest in PDFs are not liable for tax either on dividends paid by the PDF or on capital gains made on the sale of their shares in the PDF.

The PDF program was closed to applications for registration on 21 June 2007 as a result of the new tax concessions for early stage venture capital limited partnerships. The PDF program continues to operate for registered PDFs.

Information on the concessional treatment of unfranked dividends paid by PDFs can be found at tax expenditure B17 Unfranked dividends paid by Pooled Development Funds.

Expenditure on core technology, except where incurred by companies in partnerships, is deductible at a rate of 100 per cent over the period of related research and development activities. This deduction is capped at one third of the firm's expenditure on related research and development for the income year in question, until the core technology amount has been fully deducted. The benchmark treatment for such expenditure is that it is deductible over its effective life and consequently the scope for the 100 per cent rate potentially allows a greater rate of deduction than the benchmark.

The Refundable Research and Development (R&D) Tax Credit will be available to companies with a turnover of less than \$20 million at a rate of 45 per cent of expenditure on eligible R&D activities.

It will take the form of a 'refundable' tax offset, similar to the treatment of the former R&D Tax Offset. If a taxpayer's income tax liability is reduced to zero, the unused refundable tax offset amount can be applied to reduce other tax liabilities (such as GST). Any residual unused amounts can be refunded as cash to the company.

As the Refundable R&D Tax Credit is an expense item it does not appear as a tax expenditure in its own right. However, a tax expenditure arises because payments made under the Refundable R&D Tax Credit are exempt from tax. In addition, companies that claim the Refundable R&D Tax Credit are unable to claim deductions for the R&D expenditures concerned. The absence of these deductions constitutes a negative tax expenditure and explains why the estimates are negative.

Information on the other R&D-related tax expenditures can be found at B60, B65, B67, B95 and B96.

<i>Legislative reference:</i>	Section 731 of the <i>Income Tax Assessment Act 1936</i>						

In the 2009-10 Budget the Government announced that it will replace the existing R&D Tax Concessions with a new R&D Tax Credit with effect from 1 July 2010. Prior to 1 July 2010 companies with an annual turnover of less than \$5 million that undertake up to \$1 million of R&D are eligible to receive a refundable tax offset equivalent to the value of the R&D tax concession (which allows a tax deduction on eligible expenditure at the rate of either 125 per cent or 175 per cent).

The refundable R&D tax offset is an expense item and accordingly does not appear as a tax expenditure in its own right. Payments made under the refundable R&D offset are exempt from tax.

In addition, companies that claim the refundable R&D tax offset are unable to claim deductions for the R&D expenditures concerned. This is because the refundable R&D tax offset has already provided these companies with a benefit equivalent to the value of these deductions. The absence of these deductions constitutes a negative tax expenditure and explains why the estimates become negative after 2005-06.

Since the new R&D tax incentive does not start until 1 July 2010, as an interim measure the cap on eligible R&D has been lifted from \$1 million to \$2 million with effect from 1 July 2009. This adds \$55 million to the estimated tax expenditure in 2010-11.

Information on the other R&D-related tax expenditures can be found at B60, B65, B67, B95 and B96.

The Standard Research and Development (R&D) Tax Credit will be available at a rate of 40 per cent for eligible R&D expenditure and can be carried forward where a company's income tax liability is zero.

The Standard R&D Tax Credit will take the form of a tax offset that can be carried forward to be applied against future income tax liabilities. Carried forward amounts will result in a similar outcome to a carry forward loss arising from a tax deduction under the former R&D tax concession. If a company's income tax liability is zero, unused offset amounts cannot be applied to reduce other tax liabilities (such as GST).

Tax expenditure information on the former R&D tax scheme can be found at B60, B66, B95 and B96.

Interest income derived from loans to members by recognised small credit unions is exempt from income tax. Small credit unions have a notional taxable income less than \$50,000. This exemption does not extend to other income. A credit union that is treated in this way is not eligible for assessment as a co-operative company.

Recognised medium credit unions have a notional taxable income of less than \$150,000. For recognised medium credit unions, than rate of tax payable on the the first \$49,999 is reduced to zero. The rate of taxation payable on income between \$49,000 and \$150,000 is 45 per cent. When the income of a credit union exceeds \$150,000, it ceases to be a small credit union and the corporate tax rate applies.

The family trust rules provide a concession to the 'test individual' of a family trust, and their family group, by allowing the transfer of losses and debt deductions to members of the family trust.

The trust loss rules — the benchmark — restrict trust losses and debt deductions from being transferred to persons who did not bear the economic burden. This is achieved by imposing tests on trusts to determine if any losses and debt deductions can be claimed. The tests examine whether there has been a change in underlying ownership or control of a trust and whether certain schemes have been entered into in order to take advantage of losses or debt deductions. Family trusts have to satisfy only the income injection test. The income injection test relates to schemes where persons outside the defined family group inject income into the trust to take advantage of trust losses and debt deductions. Distributions of trust income or capital made outside the family group will generally be subject to a family trust distribution tax.

Elements of the family trust rules are also used in the franking credit trading rules to facilitate the passing through of franking credits to beneficiaries of discretionary trusts and in the company loss recoupment rules as part of the alternative conditions for the continuity of ownership test.

<i>Legislative reference:</i>	Former Subdivision 388 of the <i>Income Tax Assessment Act 1997</i>						

Primary producers and users of rural land with taxable incomes of up to \$20,000 a year were able to claim a 30 per cent tax offset for capital expenditure on soil conservation, prevention of land degradation and related measures incurred until the end of the 2000-01 income year. This concession was claimed as an alternative to the landcare deduction. The tax offset was based on one third of the eligible expenditure and was available in the year the expenditure was incurred and in each of the subsequent two years.

'Statutory effective life caps' act to override the Commissioner of Taxation's determinations of the 'safe harbour' effective life of assets in certain cases. This provides a shorter write-off period for those assets subject to a statutory cap where the cap is below the effective life determined by the Commissioner.

Statutory caps exist for a range of assets, including:

- aircraft and certain assets used in the oil and gas industries (effective from 1 July 2002);
- trucks, truck trailers, buses and light commercial vehicles (effective from 1 January 2005); and
- tractors and harvesters (effective from 1 July 2007).

In-house software is essentially software that is used in-house, rather than as trading stock, and that is a capital asset, rather than fully deductible in the year of purchase. It includes software, or a right to use software, that the taxpayer has acquired, developed or has had another entity develop.

Expenditure on in-house software is depreciated over a statutory effective life, rather than an effective life that is self-assessed by the taxpayer or that is determined by the Commissioner of Taxation. Prior to 13 May 2008, the statutory effective life was 2.5 years, which gave rise to a tax expenditure in relation to software which has an effective life greater than 2.5 years. For expenditure in relation to software assets newly held after 13 May 2008 the statutory effective life is 4 years.

'Balancing adjustments' arise when the disposal value of a depreciating asset varies from its depreciated value. The tax liability for such balancing adjustments can be deferred where the balancing adjustment arises from certain changes in ownership, such as disposal as a result of a marriage breakdown. The transferee is taken to acquire the asset at the written down value and must depreciate the asset in the same way as the transferor.

Prior to 21 September 1999, balancing adjustment offsets were also available when replacement items of plant and equipment were acquired. This treatment is available to businesses with turnover of less than \$1 million for assets acquired before 1 July 2001.

Assets costing less than \$1,000 can be written off at the declining balance rate of 37.5 per cent through a low value asset pool. Once a taxpayer elects to create a low value pool, all assets that cost less than \$1,000 are subject to the declining balance rate treatment. A low value asset pool is available to taxpayers who choose not to, or are ineligible to, enter the Simplified Tax System.

A low value pool mechanism for the depreciation of assets was introduced to reduce taxpayers' compliance costs by removing the need to track individual items for depreciation purposes.

Expenditure incurred by small and medium size businesses on acquiring plant or software (including upgrades) for the purpose of implementing the GST was immediately deductible. This deduction was available for the year ending 30 June 2000, provided that the equipment was ordered by 30 June 2000 and installed by 30 June 2001.

The estimates for this tax expenditure reflect that it brings forward the timing of tax deductions relative to deductions available under the effective life benchmark. This tax expenditure has a transitional impact until all eligible GST-related plant and software would have otherwise been fully depreciated.

In the 2009-10 Budget the Government announced that it will replace the existing R&D Tax Concessions with a new R&D Tax Credit with effect from 1 July 2010. Prior to 1 July 2010 companies that increase expenditure on labour related components of research and development (R&D) which are Australian-owned are eligible to receive a 175 per cent tax concession for increases above the average of the previous three years' R&D expenditure. The 175 per cent premium covers all additional R&D expenditure excluding plant, pilot plant, contracted plant, plant leases, core technology, R&D related interest and items excluded from the 125 per cent R&D tax concession.

The concession is available to the extent that total R&D expenditure has increased. Total R&D expenditure includes both the Australian-owned and foreign-owned components of the premium tax concession. This deduction has been available to companies from the first income year starting after 30 June 2001.

Companies that undertake research and development (R&D) on behalf of a grouped foreign company are eligible for a 175 per cent tax concession for increases in R&D expenditure above the average of the previous three years' of R&D expenditure. Expenditure on behalf of a grouped foreign company which contributes to the calculation of the 175 per cent tax concession must be labour related and will be subject to a specific deduction at the rate of 100 per cent.

The concession is only available to the extent that total R&D expenditure has increased. Total R&D expenditure includes both the Australian-owned and foreign-owned components of the premium tax concession. This deduction has been available to the Australian subsidiaries of multinational enterprises from 1 July 2007.

Small businesses with annual turnover of less than \$2 million may choose to use a simplified capital allowances regime for depreciating assets. Small businesses may write off immediately purchases costing less than \$1,000 and depreciate assets that cost \$1,000 or more at accelerated rates under a pooled arrangement. Depreciating assets with an effective life of less than 25 years are depreciated in a general pool at a rate of 30 per cent. Depreciating assets with an effective life of 25 years or more are depreciated in a long life pool at a rate of 5 per cent.

Prior to July 2007, this concession was available only to taxpayers that were part of the former Simplified Tax System. As part of aligning small business thresholds, the turnover eligibility threshold was raised from \$1 million to \$2 million.

The National Urban Water and Desalination Plan provides financial assistance to approved projects, such as desalination, water recycling and stormwater harvesting projects, which improve the security of water supplies to Australia's major cities. The financial assistance is provided as refundable tax offsets, unless the applicant receiving the assistance is outside the tax system, in which case they receive a grant. Payments made as refundable tax offsets under the plan are exempt from tax.

For stormwater harvesting projects, the amount of the offset is up to 50 per cent of eligible capital costs up to a maximum of \$20 million. For other projects the payments are capped at 10 per cent of eligible capital costs up to a maximum of \$100 million per project.

The National Rental Affordability Scheme provides tax and cash incentives to providers of new dwellings on the condition that they are rented to low and moderate income households at 20 per cent below market rates. In 2008, the incentives were \$6,000 from the Commonwealth Government and at least \$2,000 from State and Territory governments. The incentives are indexed over the life of the scheme.

The \$6,000 contribution from the Commonwealth Government would be paid as a refundable tax offset to taxable entities, and as a grant to charities endorsed by the Australian Taxation Office. The payment of the refundable tax offset is exempt from tax. The (minimum) \$2,000 contribution from the State and Territory governments may be paid as either a cash grant or in-kind assistance.

Both incentives are exempt from tax.

Investors in forestry managed investment schemes (MIS) are able to claim immediate upfront deductions for their expenditure on such schemes, provided that, amongst other requirements, at least 70 per cent of the expenditure is directly related to developing forestry. The statutory deduction available to investors in forestry MIS allows investors to bring forward their deductions relative to the benchmark.

Interests in forestry MIS can be traded, subject to a four-year holding period rule and a market value pricing rule for initial investors. On 21 October 2009, the Government announced that it would amend the four-year holding period rule to allow an investor's deduction to stand where the rule is failed for reasons genuinely outside the investor's control. These circumstances include the death of the investor or insolvency of the MIS manager. The proceeds on the sale or harvest of a forestry MIS interest by an initial investor are taxable income of the investor.

Non-superannuation termination payments are generally paid by employers to terminating employees. Before 1 July 2007 these amounts were taxed in the same way as superannuation lump sums from untaxed funds with the exception of bona fide redundancy payments and approved early retirement scheme payments which were tax free up to certain limits. This tax expenditure excludes the treatment of payments in lieu of leave.

From 1 July 2007, non-superannuation termination payments are taxed differently to lump sums paid from untaxed funds. Pre-June 1983 and invalidity amounts are tax free, and the residual is taxed at 15 per cent for amounts up to \$140,000 (indexed) for recipients aged above preservation age and at 30 per cent for those aged under preservation age. Amounts in excess of \$140,000 are taxed at the top marginal tax rate. The Medicare levy is payable in addition to these rates. Transitional arrangements also apply for entitlements in place as at 9 May 2006. The tax treatment of genuine redundancy payments and early retirement scheme payments has not changed.

This tax expenditure excludes the treatment of payments in lieu of leave (see the tax expenditures C2 *Capped taxation rates for lump sum payments for unused recreation and long service leave* and C16 *Taxation of five per cent of unused long service leave accumulated by 15 August 1978*).

Capital gains made by complying superannuation funds are taxed concessionally. Two-thirds of any nominal capital gain made from a capital gains tax event occurring on or after 21 September 1999 is included in the assessable income of a fund, provided the fund has held the asset for at least one year. The effect of this item is in addition to the effect of lower tax rates for superannuation investments reported in the tax expenditure *Superannuation – concessional taxation of superannuation entity earnings* (C6). The amounts reported reflect the additional tax that would be raised at fund rates on the same investments if total nominal capital gains were taxed instead of discounted gains or gains with frozen indexation.

Currently, employer contributions, after certain costs of the superannuation entity are deducted, are generally taxed in the assessable income of a superannuation entity at a concessional rate of 15 per cent. Caps apply to the amount of concessional contributions which may receive this concessional taxation treatment. From the 2009-10 financial year onwards the concessional contributions cap has been reduced from \$50,000 to \$25,000 per annum. The transitional cap, which applies to persons aged 50 and over, has been reduced from \$100,000 to \$50,000. Contributions above these limits are taxed at the top marginal tax rate and Medicare Levy by applying an additional tax of 31.5 per cent on the excess contribution payable by the individual.

Before 1 July 2007, employers were not entitled to a deduction for contributions in excess of an employee's age-based limit.

## Tax Expenditures Statement

The superannuation surcharge for higher income earners applied to some of these contributions in 2004-05 and earlier financial years. The maximum surcharge rates were reduced from the original 15 per cent to 14.5 per cent in 2003-04, and to 12.5 per cent in 2004-05. The surcharge was abolished for contributions made on or after 1 July 2005.

In any particular year, the application of the benchmark treatment rather than the concessional tax rates to these contributions would increase tax revenue by the amounts indicated.

The earnings of complying superannuation entities, after certain costs of the entities are deducted, are taxed at a concessional rate. The tax rate on earnings is 15 per cent (for the accumulation phase) or nil where they are derived from assets which are used to meet current pension liabilities (drawdown phase). Complying superannuation entities are entitled to refunds of excess imputation credits attached to dividends payable to the fund.

For financial year 2007-08 and later years, this item also includes the concessional taxation of fund earnings on funded superannuation income streams (for earlier years all superannuation income stream related items are included in the tax expenditure *Superannuation – C15 tax on funded superannuation income streams*).

This tax expenditure reflects the extra tax in a particular year that would be collected if superannuation earnings of that year were held constant, but were taxed at the personal tax rates of members rather than fund rates. The effect of taxation on subsequent accumulations, earnings and tax is not taken into account.

In the case of unfunded superannuation, no employer contribution is made until the actual benefit is provided on the member's retirement. The appropriate benchmark treatment for these amounts is therefore taxation at personal rates on receipt by the member.

Unfunded superannuation lump sums are taxed in the same way as funded superannuation lump sums from untaxed funds (see the tax expenditures C13 *Superannuation – tax on funded lump sums relating to post-June 1983 service* and C14 *Superannuation – tax on funded lump sums relating to pre-July 1983 service*).

Pension payments from an unfunded source are included in the taxpayer's assessable income and are subject to tax at marginal rates. From 1 July 2007, pension payments from an unfunded source became eligible for a 10 per cent tax offset for persons aged 60 or over.

The taxation of a death benefit paid to a dependant as a reversionary pension depends on the age of the primary and reversionary beneficiary. If either was aged 60 or over at the time of death, then payments to the reversionary beneficiary will be taxed at marginal rates with a 10 per cent tax offset. If both were under age 60 at the time of death, the pension will be taxed at the reversionary beneficiary's marginal tax rate (less any tax free component and any relevant offset) unless, or until, the reversionary beneficiary is aged 60 or over, in which case it will become eligible for the 10 per cent tax offset.

Death benefit payments to non-dependants must be made as a lump sum. Lump sum death benefits paid to a non-dependent from an untaxed source are taxed at 30 per cent.

Currently, certain persons are entitled to a full deduction for all personal contributions they make to a superannuation fund, provided that the deduction is not greater than the amount that reduces the individual's taxable income to nil. For the purposes of this deduction, the persons entitled are those who have less than 10 per cent of their income earned as an employee. This includes many unincorporated and substantially self-employed persons and persons not in paid employment.

These personal contributions are concessional deductible contributions and subject to the 15 per cent tax rate on the first \$25,000 contributed per annum, subject to transitional arrangements for persons aged 50 and over at \$50,000 per annum. Contributions above \$25,000 (\$50,000) are taxed at the top marginal tax rate and Medicare Levy by applying an additional tax of 31.5 per cent on the excess contribution. This tax is payable by the individual.

Prior to 1 July 2009, individuals could make up to \$50,000 (\$100,000 for persons over 50) of concessional deductible contributions subject to the 15 per cent tax rate. The 2009 changes to the levels subject to 15 per cent tax are reflected in the tax expenditure estimates with a one year delay.

Prior to 1 July 2007, eligible self-employed persons received a full tax deduction for the first \$5,000 of contributions plus 75 per cent of any remaining contributions up to a maximum deduction equal to their age-based limit.

Under the benchmark, contributions by these persons would not be deductible, on the basis that they are not outgoings. If the level of contributions was maintained, but the contributions were not deductible, revenue would be higher by the amounts indicated.

The superannuation surcharge for higher income earners applied to some of these contributions in 2004-05 and earlier financial years. The surcharge was abolished for contributions made on or after 1 July 2005.

Currently, employer contributions, after certain costs of the superannuation entity are deducted, are generally taxed in the assessable income of a superannuation entity at a concessional rate of 15 per cent; the tax expenditure from this is shown at C5 Superannuation – concessional taxation of employer contributions.

Caps apply to the amount of concessional contributions which receive this concessional taxation treatment. From the 2009-10 financial year onwards the concessional contributions cap has been reduced from \$50,000 to \$25,000 per annum. The transitional cap, which applies to persons aged 50 and over, has been reduced from \$100,000 to \$50,000. Contributions above these limits are taxed at the top marginal tax rate and Medicare Levy by applying an additional tax of 31.5 per cent on the excess contribution payable by the individual. A negative tax expenditure occurs where a person contributes to superannuation above the relevant cap and their marginal rate is below the top marginal rate.

Non-concessional contributions include those made from an individual's after tax income (generally undeducted contributions) and excess concessional contributions (that is, employer and personal deducted contributions which have exceeded the annual concessional contribution thresholds). The benchmark treatment of these contributions is that they are taxed like any other income in the hands of the individual (that is, the contributions are taxed at the individual's marginal tax rate).

Prior to 9 May 2006, the tax treatment of non-concessional (then referred to as undeducted) contributions was consistent with the benchmark. Since 10 May 2006, non-concessional contributions have been subject to a cap, with contributions in excess of the cap taxed at the top marginal tax rate, payable by the individual. The taxation of these excess contributions represents a deviation from the benchmark.

A cap of \$1 million applies to non-concessional contributions made between 10 May 2006 and 30 June 2007. From 1 July 2007, an annual cap of \$150,000 applies to non-concessional contributions, although people under age 65 will be able to bring forward up to two years worth of non-concessional contributions. Exemptions to the cap include proceeds from the disposal of assets that qualify for some small business CGT concessions, up to a lifetime limit of \$1.045 million, and proceeds arising from structured settlements or orders for personal injuries.

For taxed funds, the taxable component of lump sums is generally taxed at 20 per cent where the taxpayer is aged under 55 years.

For lump sums paid before 1 July 2007 to taxpayers aged 55 or over, or paid after 30 June 2007 to taxpayers aged 55 to 59, the element of any lump sum benefit taxed during the accumulation stage is typically taxed at zero per cent up to the low rate threshold and 15 per cent thereafter.

Untaxed funds are those where superannuation benefits are not taxed during the accumulation phase. For taxpayers under age 55 both before and from 1 July 2007, the taxation rate on these elements is typically 30 per cent. For taxpayers aged 55 or over before 1 July 2007, the element of a lump sum untaxed during the accumulation stage was typically taxed at 15 per cent up to the low rate threshold and 30 per cent

thereafter. From 1 July 2007, lump sums received by taxpayers aged 55 to 59 are subject to tax rates ranging from 15 per cent to the top rate.

From 1 July 2007, the element of a lump sum from a taxed source relating to post-June 1983 service is tax free for persons aged 60 or over. The post-June 1983 element untaxed in a fund is typically taxed at 15 per cent up to an amount of \$1 million for persons aged 60 or over.

Special arrangements apply to lump sums paid to certain temporary residents who have departed Australia. The taxed element of these lump sum payments is taxed at 35 per cent and the untaxed element at 45 per cent (from 1 July 2002 to 1 April 2009 the tax rates were 30 per cent and 40 per cent respectively).

Lump sum payments to death benefit dependents (and non-dependents of service and police personnel killed in the line of duty) and to persons suffering from a terminal medical condition are tax free.

Death benefit payments to non-dependants must be made as a lump sum. Lump sum death benefits paid to a non-dependent from a taxed source are taxed at 15 per cent.

The amounts reported are the tax raised on these lump sums.

Before 1 July 2007, the part of a lump sum benefit relating to service before July 1983 was taxed at a lower rate. Only 5 per cent of the pre-July 1983 amount was included in a taxpayer's assessable income and subject to tax at marginal rates. This concessional treatment reflected the regime for taxing eligible termination payments that existed before July 1983. Applying the post-June 1983 tax rates to these funded benefits would have imposed a tax retrospectively. The amounts reported are the tax raised on these lump sums.

From 1 July 2007, the component of a lump sum benefit relating to pre-July 1983 service is tax free.

The taxable component of superannuation income stream payments received by a taxpayer before 1 July 2007 was included in assessable income and subject to tax at marginal rates. The taxable component of superannuation income stream payments from a taxed source to a taxpayer aged 55 or over generally attracted a tax offset of 15 per cent. The tax raised reduces the total superannuation tax expenditure, as under the benchmark withdrawals from superannuation are tax free.

From 1 July 2007, superannuation income stream payments from a taxed source are tax free for persons aged 60 or over. The taxable component of superannuation income stream payments received by a taxpayer below age 60 are included in assessable income. A tax offset of 15 per cent applies to the taxable component of superannuation income stream payments paid to taxpayers aged 55 to 59, and to disability benefits paid to taxpayers of any age.

The taxable component of pension payments from an untaxed source are eligible for a 10 per cent tax offset for persons aged 60 or over.

From 1 July 2007, this item relates to the tax on funded pensions for persons under the age of 60.

The taxation of a death benefit paid from a taxed source as a reversionary pension depends on the age of the primary and reversionary beneficiary. If either the primary or reversionary beneficiary was aged 60 or over at the time of death, then income stream payments to the reversionary beneficiary will be tax free. If both were under age 60 at the time of death, the taxable component will be taxed at the reversionary beneficiary's marginal tax rate (less a 15 per cent tax offset) unless, or until, the reversionary beneficiary is aged 60 or over, in which case it will be tax free.

Transfers of retirement savings from overseas countries into the Australian superannuation system are generally treated as non-concessional contributions.

Under this measure amounts transferred from a New Zealand Kiwi Saver account to an Australian APRA regulated complying superannuation fund will also be generally treated as non-concessional contributions.

As such New Zealand sourced retirement savings transferred under the scheme will be subject to the non-concessional contributions cap on initial entry into the Australian superannuation system.

## FRINGE BENEFITS TAX

The fringe benefits tax benchmark comprises:

- a tax base including all benefits provided to an employee or an associate of an employee in respect of the employment of the employee;
- generally, a deduction to the employer for the cost of providing fringe benefits and the amount of fringe benefits tax paid;
- the tax rate is the employee's personal marginal income tax rate plus the Medicare levy;
- the employer as the tax unit; and
- the fringe benefits tax year as the tax period (1 April to 31 March).

<i>Estimate Reliability:</i>		Low					
<i>Commencement date:</i>		1986			<i>Expiry date:</i>		
<i>Legislative reference:</i>		Section 9 of the <i>Fringe Benefits Tax Assessment Act 1986</i>					

Under the fringe benefits tax benchmark, the value of a car fringe benefit is the cost of providing the vehicle (for instance, where the vehicle is provided under a lease, the value of the lease payments) plus the associated vehicle running costs. The statutory formula method for valuing car fringe benefits values the benefit as a proportion of the acquisition cost of the vehicle, which declines as distance travelled by the vehicle each year increases. This approach may result in the undervaluation of the benefit when calculating fringe benefits tax with the result that less tax is paid on car fringe benefits than would be if the cost of the benefit were paid by the employee out of after tax cash remuneration.

These estimates have been revised significantly since the 2008 TES, reducing the estimated value of the tax expenditure. This reflects a reassessment of data and methodology for estimating this tax expenditure item.

A car parking fringe benefit arises if within a one kilometre radius of the premises on which the car is parked there is a commercial parking station that charges a fee for all day parking that is more than a specified car parking threshold calculated by reference to movements in the consumer price index. The threshold for the fringe benefits tax year commencing 1 April 2009 is \$7.25. For fees under the threshold no parking fringe benefit arises.

The fringe benefit only applies to cars (any motor-powered road vehicle designed to carry a load of less than one tonne and fewer than nine passengers). Motorcycles are exempt from fringe benefits tax for the purposes of this concession.

The tax expenditure also arises due to the availability of five different methods by which employers can calculate their fringe benefits tax liability for the car parking benefit. The use of these methods may result in the undervaluation of the benefit when calculating fringe benefits tax with the result that less tax is paid on car parking fringe benefits than would be if the cost of the benefit were paid by the employee out of after tax cash remuneration.

## Tax Expenditures Statement

In the 2008-09 Budget the Government amended this exemption by excluding meals under a salary sacrifice arrangement, with effect from 7:30 pm (AEST) on 13 May 2008.

The previous FBT exemption allowed employees with a meal card arrangement to purchase meals out of their pre-tax income. The change will ensure equity with other employees who have to purchase meals out of their after-tax income.

The changes do not affect subsidised canteens that are provided to all staff and that are not part of a salary sacrifice arrangement.

<i>Legislative reference:</i>	Section 65J of the <i>Fringe Benefits Tax Assessment Act 1986</i>						

Certain not-for-profit, non-government bodies are eligible for a 48 per cent rebate of the fringe benefits tax that would otherwise be payable on up to \$30,000 of the grossed-up taxable value of fringe benefits per employee.

In general, the rebate applies to religious institutions, not-for-profit scientific or educational institutions, charitable institutions, schools, trade unions and associations

of employers or employees. The rebate also applies to a range of not-for-profit societies, associations or clubs that are entitled to be exempt from income tax.

Public benevolent institutions and public hospitals receive different treatment (see tax expenditures D8 and D6).

## CAPITAL GAINS TAX

The capital gains tax benchmark comprises:

- taxation of gains on a realisation basis (that is, at the time an asset is disposed of) rather than on accrual;
- a tax base of nominal gains or losses from the realisation of property where the realisation is not an aspect of the carrying on of a business; and
- the limitation of Australian taxation of the capital gains of foreign residents to gains on the direct or indirect disposal of interests in Australian land (and similar assets such as mining rights) and branch office assets.

<i>Commencement date:</i>	2000			<i>Expiry date:</i>			
<i>Legislative reference:</i>	Section 104-47 of the <i>Income Tax Assessment Act 1997</i>						

For capital gains tax purposes, perpetual conservation covenants are treated as a part disposal of land, rather than the creation of a right. This treatment results in a reduced capital gain because a portion of the cost base of the land is taken into account. Previously the capital gain equalled the amount received for the covenant less incidental costs.

Landowners can also benefit from any capital gains tax concession or exemption that may apply to the capital gain. For example, a capital gain from a covenant granted in respect of land owned before 20 September 1985 is exempt. In addition, the capital gains tax discount may now apply if the land has been owned for at least 12 months.

Capital gains or losses on the disposal of an individual's main residence and up to two hectares of adjacent land are exempt from capital gains tax.

- A taxpayer is entitled to treat a dwelling as their main residence from the time they acquire it until the time when they first occupy it provided they occupy it as soon as practicable.

- A taxpayer is entitled to treat a dwelling as their main residence indefinitely if it was the main residence and then ceases to be their main residence provided it is not used to produce assessable income.
- A taxpayer is entitled to acquire a dwelling that is to become their main residence, whilst still owning an existing dwelling and treat both dwellings as their main residence for up to six months or until their ownership of the existing dwelling ends, whichever occurs first.
- A taxpayer is entitled to treat a block of land as their main residence, if the land was acquired for the purposes of building a dwelling, the dwelling is completed within four years of acquiring the land, the taxpayer moves into the dwelling as soon as practicable and the dwelling continues to be their main residence for at least three months.

See tax expenditure E5 for the 50 per cent concession component of the main residence exemption. Appendix C also provides further discussion of various estimates of the main residence exemption.

Capital gains or losses on the disposal of an individual's main residence and up to two hectares of adjacent land are exempt from capital gains tax. Disposals of other assets by individuals or trusts receive a capital gains tax exemption applying to 50 per cent of any nominal gain where the asset has been owned for at least 12 months.

The capital gains tax treatment of the main residence effectively provides a 100 per cent exemption. Conceptually, this can be split into a component reflecting the discount provided to disposals of non-main residence assets and a 'top up' component that brings the concession up to 100 per cent.

The remainder of the value of the CGT main residence exemption, representing the value of the concession relative to the normal CGT rules, is reported in tax expenditure E4. Appendix C provides further discussion of various estimates of the main residence exemption. Tax expenditure E14 provides further detail on the 50 per cent concession applying to other assets.

A taxpayer's dwelling may continue to be treated as their main residence for up to six years (the six year rule) even if the dwelling ceases to be their main residence and is used to produce assessable income. This is provided that no other dwelling is treated as the taxpayer's main residence during this time.

In addition, from 20 August 1996, a taxpayer who receives a dwelling as beneficiary of a deceased estate, or who owns the dwelling as the trustee of a deceased estate, may be able to ignore for capital gains tax purposes, any use of the dwelling to produce assessable income by the deceased prior to their death if:

- the dwelling was the deceased's main residence before their death; and
- it was not being used to produce assessable income at the time of the deceased's death or, if the dwelling was used to produce assessable income, that use was ignored under the six year rule.

Capital gains and capital losses arising under the demutualisation of a mutual entity, including a life insurer, general insurer or health insurer are disregarded for members and/or policyholders that receive shares in the demutualised entity.

In addition:

- members and policyholders of a demutualising life insurer receive a cost base for their shares based on the embedded value of the life insurer;
- members and policyholders of a demutualising general insurer receive a cost base for their shares based on the net tangible assets value of the general insurer;
- policyholders of a demutualising private health insurer receive a cost base for their shares based on the market value of the private health insurer; and
- policyholders and members of a demutualising friendly society that is a life insurer and/or a private health insurer receive a cost base for their shares that is based on the market value of the private health insurance business (if any) and the embedded value of any other businesses of the friendly society.

A capital gains tax roll-over is available for capital gains where an asset is compulsorily acquired, lost or destroyed and the taxpayer purchases a replacement asset. In recognition that the disposal was not initiated by the taxpayer, the capital gains liability is deferred from the time of the compulsory acquisition, loss or destruction until the ultimate disposal of the replacement asset.

This measure has been extended to establish the same treatment for a compulsory acquisition whether by a private or public acquirer and to provide greater flexibility for landowners whose land is compulsorily subject to a mining lease.

A capital gains tax roll-over is available for capital gains arising from an exchange of interests in companies or fixed trusts. The roll-over ensures that an equity holder who exchanges original shares or other equity for new equity in a takeover or merger can defer a capital gains tax liability arising from the exchange until the ultimate disposal of the replacement asset. The roll-over ensures that capital gains tax does not impede takeovers and similar arrangements. This tax expenditure is likely to vary considerably depending upon actual takeover and merger activity. Estimates for the projection years are based on the average activity in preceding periods.

United States or other approved jurisdictions, that holds less than 10 per cent of the committed capital of a venture capital limited partnership.

As foreshadowed in the 2006-07 Budget, the venture capital limited partnerships regime has been enhanced by:

- removing a range of restrictions including allowing investment in unit trusts and convertible notes as well as shares;
- relaxing the requirement that 50 per cent of assets and employees must be in Australia for 12 months after making the investment; and
- removing restrictions on the country of residence of investors.

## **3.7 Consumption tax benchmark**

The Australian Government imposes taxes on consumption of particular goods, services or activities and on particular commodities. The tax base for the consumption tax benchmark is made up of four components.

- The commodity tax benchmark relates to the consumption of fuel (or energy), tobacco, types of alcoholic beverages and motor vehicles.
- The customs duty benchmark relates to the importation of goods into Australia.
- The natural resource tax benchmark relates to the extraction and production of Australia's natural resources.
- The goods and services tax benchmark relates to the final consumption of goods and services by households.

## COMMODITY TAXES

Commodity taxes include volumetric taxes on the consumption of tobacco, fuel, beer, spirits (and equivalent imports), and *ad valorem* taxes on the consumption of wine and luxury cars. These taxes are imposed at either the retail, manufacture or importation stage.

For these taxes, the commodity tax benchmark comprises:

- either the value or quantity of the commodity sold as the tax base;
- the rate of tax that applies to the price or quantity of the commodity sold as the tax rate; and
- the entity that has the legal obligation to pay the tax as the tax unit.

Commodity taxes also include customs duties on goods imported into Australia. The commodity tax benchmark for customs duties comprises goods imported into Australia are free from customs duty, except to the extent that the customs duty imposed is equivalent to taxes imposed on domestically produced goods, such as excise equivalent customs duties.

Before 1 July 2006, diesel with a sulphur content higher than 50 parts per million was subject to a higher rate of excise than the benchmark rate. The benchmark rate is the rate that applies to unleaded petrol and ultra low sulphur diesel. An excise differential of one cent per litre was implemented from 1 July 2003 and was increased to two cents per litre from 1 January 2004.

From 1 January 2006, diesel with more than 50 parts per million of sulphur no longer meets fuel standards, and is no longer able to be sold unless a waiver is obtained from the Minister for the Environment, Heritage and the Arts.

Before 1 July 2006, leaded petrol was subject to a higher rate of excise than the benchmark rate. The benchmark rate is the rate that applies to unleaded petrol and ultra low sulphur diesel. The excise differential, which equated to around two cents per litre was originally introduced in 1994 to address health concerns associated with the use of leaded fuels.

The minimal nature of this tax expenditure from 2002-03 reflected the introduction of lead replacement petrol, which is subject to excise at the benchmark rate, and restricted access to leaded petrol (under the *Fuel Quality Standards Act 2000*) from 1 January 2002. The excise differential was removed on 1 July 2006.

The benchmark rates for alternative fuels vary depending on energy content but currently the bio-fuels (ethanol and biodiesel) fuel tax rate is based upon the fossil fuel rate. This gives rise to a negative tax expenditure for ethanol which is taxed at a higher rate than its benchmark. The gaseous fuels (liquefied petroleum gas, liquefied natural gas and compressed natural gas) are exempt from fuel tax.

The estimates do not include the Energy Grants Cleaner Fuels Scheme (EGCFS) and Ethanol Production Subsidy as they are expenditure programs. These programs currently reduce the effective rate of fuel tax on bio-fuels to zero. The EGCFS will expand to progressively introduce effective fuel tax on the bio-fuels and gaseous fuels from 2011.

<i>Commencement date:</i>	2000				<i>Expiry date:</i>		
<i>Legislative reference:</i>	Item 1 of the Schedule to the <i>Excise Tariff Act 1921</i>						

Alcoholic beverages (other than beer) with an alcohol content not exceeding 10 per cent are subject to a higher effective rate of excise than applies under the benchmark. The benchmark is the tax treatment of full strength beer sold in containers not exceeding 48 litres. Under the benchmark alcohol equivalent to the first 1.15 per cent of a beverage's volume is not excisable where the alcohol content does not exceed 10 per cent. This excise-free threshold is not available to alcoholic beverages other than beer (mainly 'ready to drink' beverages) giving rise to a negative tax expenditure.

## Tax Expenditures Statement

From 27 April 2008 the excise on these ready to drink products increased to the same level as applies to spirits.

<i>Legislative reference:</i>	A New Tax System (Luxury Car Tax) Act 2000						

The luxury car tax currently applies to cars that have a GST inclusive price over \$57,180 (for the 2009-10 financial year) However, the tax applies only on the GST exclusive value of the car that exceeds \$57,180.

On 1 July 2008 the luxury car tax rate increased from 25 per cent to 33 per cent. Since 3 October 2008, eligible fuel efficient cars have been subject to a threshold of \$75,000 for luxury car tax purposes and from 1 July 2008 a tax refund of up to \$3,000 of the amount of luxury car tax paid has been available for 'primary producers' or certain tourism businesses that acquire a 'refund-eligible car'.

As motor vehicle purchases are not taxed under the benchmark, the luxury car tax is a negative tax expenditure.

## NATURAL RESOURCES TAXES

The Australian Government taxes profits from the extraction and production of unprocessed petroleum (for example, crude oil, LPG and condensate) and, in certain cases, natural gas. Different taxation arrangements for unprocessed petroleum products applied to projects that commenced before the 1986-87 financial year.

The benchmark for petroleum projects that commenced on or after 1 July 1986 is based on the petroleum resource rent tax (PRRT).

- The tax base includes receipts from offshore petroleum production (excluding projects located in the North West Shelf) less eligible project expenditures.
  - Under the PRRT any eligible expenditure which is not offset against revenue in the current year can be compounded and offset against future PRRT income. The rate at which expenditure is compounded and carried forward depends on the category of expenditure and when it was incurred. The benchmark uplift rate for exploration expenditure is the long term bond rate plus 15 percentage points and for general project expenditure is the long term bond rate plus 5 percentage points.
- The benchmark tax rate is 40 per cent of the project's profits.
- The benchmark tax unit is the petroleum project.

The benchmark for petroleum projects that commenced before 1 July 1986 (for example, the North West Shelf) is the crude oil excise and is comprised of the following features:

- the barrel equivalent production of crude oil from fields of greater than 30 million barrels as the tax base;
- the rate of tax that applies to crude oil as the tax rate, with applicable rates determined by the date that the field was discovered (that is, new, intermediate or other); and
- the entity that has the legal obligation to pay the tax as the tax unit.

Prior to midnight (Canberra time), 13 May 2008, condensate produced in a State or Territory, or inside the outer limits of the territorial sea of Australia, or marketed separately from a crude oil stream, or in the North West Shelf project area was exempt from the crude oil excise. Condensate is light oil extracted from 'wet' gas and primarily processed for use in motor vehicles (commonly known as petrol).

As announced in the 2008-09 Budget, the tax exemption for condensate was abolished with effect from midnight (Canberra time) 13 May 2008. From this date, condensate production from petroleum fields located in the North West Shelf project area and onshore Australia have been subject to the same excise rates as those applicable to petroleum fields discovered after 18 September 1975.

However, the benchmark for condensate produced from fields discovered prior to 18 September 1975 are the higher excise rates applied to production from fields discovered prior to 18 September 1975.

## GOODS AND SERVICES TAX BENCHMARK

The goods and services tax benchmark comprises:

- the value of the final supply of all goods and services privately consumed and investment in residential housing in Australia as the tax base;
- the entity making a supply (or receiving a supply in the case of reverse charges) as the tax unit;
- the existing GST rate as the tax rate; and
- the financial year as the taxation period.

<i>Legislative reference:</i>	A New Tax System (Goods and Services Tax) Act 1999							

Generally, financial supplies are input taxed, meaning that an entity is not entitled to input tax credits for acquisitions relating to the financial supplies made by the entity. However, an entity can be entitled to input tax credits for its financial acquisitions if it does not exceed the financial acquisitions threshold. The entitlement to input tax credits for financial acquisitions in these circumstances is regarded as a positive tax expenditure.

An entity does not exceed the financial acquisitions threshold if the input tax credits it would have been entitled to, had the acquisitions been for a creditable purpose, do not exceed \$50,000 or 10 per cent of their total input tax credits for the year.

Financial supplies and acquisitions of financial supplies are input taxed. This means financial supplies are not subject to GST, but input tax credits cannot be claimed on inputs to either the supply or to the acquisition of the supply. When input taxed supplies are made to consumers, a tax expenditure arises as less than 10 per cent of the total value added is remitted to the Australian Taxation Office. When input taxed supplies are made to other registered businesses a negative tax expenditure arises as input tax credits cannot be claimed for this supply.

A supply of private health insurance by a private health insurer (within the meaning of the *Private Health Insurance Act 2007*) is GST free. In line with the GST treatment of general insurance, the tax expenditure for this item is based on the difference between the premium income of private health insurers and the value of benefits paid out.

Some services provided by care and specialist disability providers are GST free. The quality of care principles found in the *Aged Care Act 1997* apply in determining the tax status of specific care services. In general, publicly funded aged or disability care

services are GST free, as are privately funded aged care services which meet the quality of care principles found in the *Aged Care Act 1997* and are provided to those needing daily living activities assistance or nursing services.

Supplies of religious services are GST free if supplied by a religious institution and the supplied service is integral to the practise of that religion. Certain religious bodies can form a 'GST religious group' which will effectively be treated as a single entity. The broad effect is that supplies made within the group are not subject to GST and acquisitions made within the group do not give rise to input tax credits.

### H18 GST — Supplies of farm land

Agriculture, forestry and fishing (\$m)							
2005-06	2006-07	2007-08	2008-09	2009-10	2010-11	2011-12	2012-13

Specific supplies of farm land are GST free. This includes: farm land supplied for farming on which a farming business has been carried on for at least five years and upon which a farming business is intended to continue to be carried on, on the land; and subdivided farm land that is potential residential land that is supplied to associates.

Under the GST benchmark, farm land supplied to an unregistered purchaser for farming; or farm land that is potential residential land supplied to an unregistered associate for nil or inadequate consideration; gives rise to a tax expenditure under this item.

No net GST would be collected under the benchmark from farm land supplied for farming to a registered business purchaser.

## Tax Expenditures Statement

From 1 July 2010, farm land supplied for farming will no longer be GST free, instead GST may be reverse charged to the recipient. The reverse charge mechanism can only be used by registered recipients. As a result, farm land supplied for farming to an unregistered recipient will no longer be GST free.

<i>Commencement date:</i>	1 July 2000					<i>Expiry date:</i>		
<i>Legislative reference:</i>	A New Tax System (Goods and Services Tax) Act 1999							

The Commissioner of Taxation can create simplified accounting methods (SAMs) that some small businesses can choose to apply with a view to reducing their GST compliance costs. SAMs allow taxpayers to apply simple ratios to calculate their GST liabilities (or components of them) rather than accounting for each supply to determine if it is taxable or non-taxable. Being ratios, SAMs will benefit some taxpayers by reducing their GST liabilities while increasing the GST liabilities of others, relative to the amounts calculated using a full GST calculation.

While SAMs are designed to reduce compliance costs rather than provide a tax concession, entities that expect to receive a tax benefit from applying SAMs are more likely to adopt this methodology than those that do not. This would be expected to result in a net tax concession.

The first supply of a precious metal by or on behalf of a refiner after the refining process to a precious metal dealer is GST free. Subsequent supplies of precious metals are input taxed. The importation of precious metals is a non taxable importation and as such GST will not be charged on the importation. The tax expenditure here is the loss of tax on the GST free and input taxed supplies and imports (where this would not be offset by input tax credits) reduced by any input tax credits denied for acquisitions related to the input taxed activities.

Most food items for human consumption that are prepared and/or consumed at home are GST free. Examples of GST free food include fresh fruit and vegetables, fish, dairy products, bread and meat. Examples of GST free beverages include milk products, tea, coffee, water and fruit juices. In addition, generally the packaging used in the supply of GST free food will itself be GST free.

## 3.8 Externalities benchmark

The externalities benchmark is included in this edition of the TES for the first time. This benchmark deals with taxes (or other revenue raising arrangements) that are imposed to ensure that the private costs of certain activities align with the social costs of those activities.

Tax expenditures reported under this benchmark have a different purpose to the taxation of income or consumption, although they may involve changes to income or consumption behaviours.

Further information on the externalities benchmark is provided in Appendix A.

## CARBON POLLUTION REDUCTION SCHEME

The Carbon Pollution Reduction Scheme benchmark comprises:

- the tax rate set by the value of the Australian emissions units in each year;
- a tax base equal to the carbon dioxide equivalent volume of all relevant emissions by entities in Australia; and
- the financial year as the period for liability.

In most covered sectors under the CPRS, only entities producing above 25,000 tonnes of emissions per year are liable. This is largely for practical reasons – participation thresholds are designed to balance the benefits of increased CPRS coverage against the costs of scheme compliance. In the interests of competitive neutrality, emissions from landfill sites that are operating in proximity to another operating landfill will be subject a lower threshold of 10,000 tonnes of emissions a year, returning to 25,000 tonnes 10 years after the landfill closes.

Below threshold emissions from deforestation, agriculture and decommissioned mines are incorporated in tax expenditures I2, I4 and I5, respectively.

Emissions from landfill sites that closed prior to 30 June 2008 will be excluded from the CPRS since operators of sites that have already closed will have no opportunity to pass on costs. Similarly, emissions from waste deposited at landfills prior to the start of the CPRS on 1 July 2011 will be considered to be legacy emissions and will not incur a liability. However, these legacy emissions will continue to count towards a landfill facility's threshold in order to ensure broad coverage of new waste emissions.

Emissions from waste deposited at landfills above the applicable threshold (25,000 tonnes per year, or 10,000 tonnes per year for landfills in proximity to another operating landfill) after 1 July 2011 will be covered by the CPRS. The corresponding below threshold emissions are incorporated into the tax expenditure I1 *CPRS thresholds for obligations*.

Fugitive emissions from decommissioned coal mines will be excluded from the CPRS. This is partly because of measurement difficulties caused by sealing a mine, but also because fugitive emissions from most decommissioned mines are expected to be below the 25,000 tonne emissions threshold. Decommissioned mines that may initially exceed the threshold are expected to fall below it within a few years.
