

### Treatment of the 'sharing economy' by regulators – the example of Uber

Uber is a platform for ride-sharing services, which works by connecting passengers directly with the drivers of vehicles. Cars are reserved by sending a text message or by using a mobile app. Some of the drivers working through Uber are accredited professionals, whereas others (on the 'UberX' platform) are not. The company was launched in 2009 and is based in the United States. Worldwide, 20,000 new drivers a month are joining Uber.<sup>40</sup>

This type of 'on-demand ride sharing' was not considered when laws governing the taxi industry were enacted. Uber has faced accusations in several jurisdictions of illegal taxicab operations. The regulatory response to Uber has varied between jurisdictions.

In Queensland the Government has decided not to create new regulations to cover UberX, with the Premier stating that they are a deregulation-minded government and don't believe in more red tape and regulation unless absolutely necessary.<sup>41</sup>

In NSW, the Transport authority has stated that the UberX service does not comply with the current NSW Passenger Transport Act 1990, and that drivers need to be accredited. However, the NSW Government noted in their submission:

The NSW Government has, however, acknowledged that it needs to consider how it adapts to new opportunities in the market and is considering its position in response to ride-sharing activities to ensure it considers the benefits to consumers and the impact on the industry.

In Victoria, the Victorian Taxi Service Commission has issued fines to some Uber drivers. Around \$60,000 of fines had been issued as of early May, with Uber pledging to pay the fines on behalf of the drivers.<sup>42</sup>

In Canada, officials at the City of Toronto have charged Uber with 25 municipal licencing offences, including operation of an unlicensed taxi brokerage and unlicensed limo service. Some rival mobile apps have obtained licenses.

In the United Kingdom, Transport for London has not stopped the operations of Uber, and London black-cab drivers have disrupted traffic as a protest.

In the United States, Uber competes with rivals such as Lyft and SideCar, which have not yet established a significant presence in Australia. California was the first jurisdiction to recognise and regulate services such as Uber, creating a new category of regulation for 'transportation network companies' (TNCs). The regulation for TNCs covers driver background checks, driver training, drug and alcohol policies, minimum insurance coverage and company licensing.<sup>43</sup>
